The University of Toronto Lawrence S. Bloomberg Faculty of Nursing Huffman Splane Emerging Nurse Scholars Forum supports early career development and international networking of emerging nursing scholars who are embarking on a research focused career. The Huffman Splane Emerging Nurse Scholars Forum is supported by a generous endowment from Dr. Verna Huffman Splane, a pioneer in nursing in Canada who held a deep conviction that nurses should be taught that they are part of a global profession. Bloomberg Nursing is widely recognized as a research-intensive environment that promotes education and scholarship in nursing.

Applications are invited from Canadian, American and international Registered Nurses or Nurse Practitioners who are near completion (i.e. data analysis complete) or have recently completed a PhD in nursing; or who currently hold or have completed a post-doctoral fellowship within the past year.

Competitive awards to provide support for travel and accommodation will be given to all successful applicants.

Selected through a peer review application process, participants will be invited to present their doctoral/postdoctoral research to peers and faculty. Preference will be given to applicants whose research and academic interests focus on public health (the health of individuals, groups or populations), health systems and/or improvement of care/outcomes.

Participants will have the opportunity to meet with nurse researchers who have established successful careers in nursing science. During the Forum, Bloomberg faculty will lead discussion sessions and speak on the successful development of an academic career.
